**Green Coffee Bean extract powder 50% CGA (*Coffea arabica L.*)**, are the raw seeds of coffee cherries, which have not been through roasting process. When the beans are still green, they contain a high level of natural antioxidants such as the phenolic acid, chlorogenic acid (CGA), typically accounting for 5-10% of green coffee beans. Studies have shown that CGA can assist in blood glucose management, boost lipid metabolism and improving insulin resistance.
